

BIOJUVE™ LIVING BIOME ESSENTIALS DUO

Packed with patented, powerhouse living Xycrobe Technology.

Product Description

This duo contains two products, the BIOJUVE Living Biome Essentials Serum and the BIOJUVE Activating Mist.

The BIOJUVE Living Biome Essentials Serum is a smooth and rejuvenating formula that hosts proprietary powerhouse Xycrobe™ technology. This living microbe technology was designed to improve the appearance of coarse wrinkles, fine lines, texture, tone, photodamage and an overall dull, lackluster complexion by enhancing the skin's microbiome and optimizing skin health.

The Activating Mist included in the duo acts as an "on" switch to activate the living microbe technology found in both the Living Biome Essentials Serum and Living Biome Essentials Serum + Retinol.

Skin Concerns

The BIOJUVE regimen helps address a wide range of skin concerns including the appearance of coarse wrinkles, fine lines, texture, tone, photodamage and an overall dull, lackluster complexion – with results starting in as little as one week! *Results may vary.

Why It's Different

BIOJUVE cares for both skin and its microbiome to help skin achieve its full potential. BIOJUVE uses one-of-a-kind, clinically-proven living microbe technology that harnesses the power of a live strain of *C.acnes defendens* to optimize skin health through the use of unique bioessentials. See the *Xycrobe Technology* section below for more information.

How To Use

Apply 1 pump of the Living Biome Essentials Serum to the hands and immediately follow with 3-4 sprays of the Activating Mist. Massage gently to cleansed skin of the face and neck to allow the duo to blend and absorb overnight.

Xycrobe Technology

Xycrobe technology is the one-of-a-kind, proprietary, living microbe technology derived from *C.acnes defendens* microbes that drives the key benefits behind BIOJUVE. These living microbes continually produce and deliver a proprietary blend of key Bioessentials™ for the benefit of the skin and the microbiome. Bioessentials™ are an unmatched blend of potent proteins, fatty acids, polypeptides, antioxidants and more, designed to help reduce damaging low-level chronic skin distress and redness not visible on the skin surface, fight oxidative stressors, as well as promote well-balanced pigment, sebum and oil production.

The BIOJUVE Living Biome Essentials Serums, both versions – with and without retinol – contain this patented Xycrobe Technology. All other BIOJUVE products help support and enhance the living microbe technology in addition to providing their own unique benefits.
